

STOPS WEED GROWTH BETTER BARRIERS™ LANDSCAPE FABRIC

FEATURES & BENEFITS

Our "Good" Quest® Better Barriers™ landscape fabric is specifically designed for use in perennial gardens.

- nursery grade with our 5 Year Guarantee
- stops weed growth in all permanent areas around your home
- a chemical-free solution to prevent weeds
- prevents garden mulches from mixing with soil
- stabilizes soil, controls erosion and separates soil profiles

Other Applications

Soil Stabilization - separates stone and subsoil to prevent intermixing under driveways, interlocking brick etc.

Drainage - reduces pressure, minimizes leakage and prevents pooling water around wood or stone retaining walls.

Erosion - helps stop erosion on stream and river banks, embankments and other slopes.

EASY TO INSTALL INSTRUCTIONS

Quest® is Canada's leader in landscape fabrics. It is a strong, uniform fabric designed to stop unwanted weed growth. At the same time, it allows air, water and nutrients to reach the roots of the desired plants. No landscape fabric is totally effective against quackgrass (twich), bindweed, or other plants propagated by rhizomes and / or weeds that start in the mulch above the fabric; thus it is advised that a weed-free environment be established prior to fabric installation.

1. Roll out our Quest® Better Barriers™ weed barrier and cut to length. When overlapping the product allow at least a 3"-5" overlap.
2. For new plants cut an X in the product large enough to plant through. If plants exist cut an X large enough to slip the product over the plant. If very large shrubs or trees are present cut a slit from the edge of the fabric to the base of the tree and slip fabric around the base. Since the slits will tend to expose the soil below, it is recommended that the slit be overlapped with strips of fabric wide enough to overlap the slit by 3"-5" on each side.
3. During installation it is recommended that you use our Quest®, reusable Ground Staples or Landscaper's Pegs to securely anchor each section of the Quest® Better Barriers™ product to the soil.
4. Cover the fabric with a minimum of 3" of bark or mulch. If covering with stone, marble chips or crushed clay then cover with at least 3"-4" of material and use enough small sized pieces to fill in the resulting spaces. All landscape fabrics are weakened by U.V. rays of the sun which makes complete coverage important for long term satisfying results.
